✔ Keep VLAN 1 membership for specific ports   Show Details

✔ Configure VLAN 7   Show Details

✔ Configure VLAN 9   Show Details

✔ Configure VLAN 12   Show Details

✔ Save the changes   Show Details

Explanation

Use the following commands to create a VLAN and assign members to the VLAN:

> Press Enter
> Bldg2>enable
> Bldg2#configure terminal
> Bldg2(config)#vlan 7
> Bldg2(config-vlan)#name Accounting
> Bldg2(config-vlan)#interface range fa0/4 - 5
> Bldg2(config-if-range)#switchport access vlan 7
> (Press Ctrl + Z)

Use similar commands to create additional VLANs and assign members. When you are finished, use the **copy run start** command in EXEC mode to save the changes.

> By default, VLAN 1 exists and all ports are members of that VLAN. You do not need to assign membership for these switch ports.
